Open Command Prompt. Head over to the Start menu. Search "cmd" there. You can also hit Run, then search for it. If both of those don't work, you will need a slightly more complex method. Open Notepad. On the top line write "Command.com" (without the quotation marks.) Save it as CMD.bat. The .bat part is VERY important. And that's it.

The CMake tutorial provides a step-by-step guide that covers common build system issues that CMake helps address. Seeing how various topics all work together in an example project can be very helpful. The tutorial documentation and source code for examples can be found in the Help/guide/tutorial directory of the CMake source code tree. Each step has its own subdirectory containing code that may be used as a starting point.
