A bet on the answer to that question (natural gas vs. renewables, solar vs. wind) is a bet on the future of the energy industry, including oil and gas companies. Oil companies have ventured into the power sector before, but those investments were focused on creating markets for natural gas and creating optionality for gas marketing and trading operations.

The future of oil in 2050. Assuming an aggressive target of 75 per cent recycling of all plastic globally by 2050, we can expect a reduction in crude oil demand by petrochemicals to approximately 14 million b/d by 2050. Vinni Malik. Nov 08, 2019, 05:31 PM IST.

~~The future of oil in 2050 - Opinion by Vinni Malik | EY~~

While the campaign against climate change will continue to challenge the long-term future of oil and gas, it will be several decades before green energy finally takes over from fossil fuels. As such, the future of oil and gas promises continued growth with emerging technologies playing a crucial role while the global population growth and the rise of the middle-class will continue to drive demand.

~~30 E Learning Book Oil Power Of The Future New Ways Of~~

There's no 'free energy', no magic bullet. Instead, the energy of the future will need to be generated by a patchwork of renewable sources: wind, solar, geothermal, hydro, and yes, nuclear power, will probably all play a role in generating the electricity of tomorrow.

~~What is the energy source of the future? | HowStuffWorks~~

In May 2020, OFTEC unveiled a strategy for the future of off-grid heating in A Strategy for Decarbonising Oil Heated Homes. They believe that oil can be replaced by a complete renewable liquid fuel by 2035: Stage 1 by 2027: 30% blend of biofuel and 70% kerosene; Stage 2 by 2035: 100% renewable liquid fuel

~~Low-carbon Heating: Heating Systems of the Future | Beller~~

Middle-American communities depend on the oil and gas industry for jobs, cheap and reliable energy, and government revenue the industry contributes both locally and nationally. We hope 'moderate' Joe keeps those communities in mind, a lot of which are in his home state of Pennsylvania, as well as the 10 million American jobs the oil and gas industry supports.

~~Power the Future~~

Scientists have also developed methods for using solar power to replace a gas-powered engine by heating hydrogen gas in a tank, which expands to drive pistons and power a generator.

~~Power of the Future: 10 Ways to Run the 21st Century~~

The world has ample supplies of oil and gas to satisfy demand for the foreseeable future. Key drivers of change in the industry relate to pressures to reduce GHG emissions, growing demand from fast-growing Asian economies, shifting supply with the rise of North America as an exporter, and the growth of alternative fuels such as solar and wind for power generation."
