## Projectile

Projectile Motion

Diagram. Analyzing  
Projectile Motion.

Consider the motion as the superposition of the motions in the x- and y-directions.

The actual position at any time is given by:

The initial velocity can be expressed in terms of its components.  $v_x = v_i \cos \theta$  and  $v_y = v_i \sin \theta$ .

Study notes...

Physics Projectile

Motion In projectile

motion, the

acceleration in the y-

direction is always

$-9.8 \text{ m/s}^2$ , while the

acceleration in the x-

direction is 0. If the

object is thrown at an

angle, the initial

velocity must be

broken up into x- and

y-components ( , ).
